

INFORMATION IS EVERYTHING

Meet the iSchool

At the University of Texas at Austin School of Information (iSchool), we come together as a community of scholars, educators, and practitioners to identify and address the information grand challenges to improve society. We are taking sociotechnical approaches to address research problems and working together to respond to social and technological novelty. We research and learn to design new tools, analyze human activities, preserve, curate, and organize information, and ensure technology serves its intended users.

#5 LIBRARY SCHOOL PROGRAM
IN THE WORLD | QS World University Rankings

What is an iSchool?

Information systems and technologies are fundamentally shaping the behaviors of individuals, organizations, and society — impacting how we connect, learn and develop new knowledge, conduct business, engage with culture, participate in government, and more.

Leading the Way in Information

In a world where information is one of our most important resources, the iSchool is changing the ways that we interact with information and technology, changing how information can make the world a better and fairer place, and changing the ways we protect and preserve our collective memory.

BY THE NUMBERS
